PROFESSIONAL SUMMARY

Information Technology graduate (B.Tech, 2026) targeting AI/ML Engineer, Generative AI Engineer, and Software Engineer roles, with hands-on experience in Python, C++, SQL, machine learning, LLMs, and RAG systems, experienced in building AI-powered applications, REST APIs, and Dockerized solutions. Solved 500+ DSA problems and led a team to the Top 6 at Smart India Hackathon 2025.

TECHNICAL SKILLS

Languages: Python, C++, SQL
Machine Learning and AI: Scikit-learn, PyTorch, XGBoost, Random Forest, Transformers, spaCy, OpenCV, LangChain, LangGraph, Natural Language Processing (NLP), Deep Learning, Large Language Models (LLMs), Generative AI, Retrieval-Augmented Generation (RAG), Feature Engineering, Model Evaluation (TF-IDF, ROUGE, BERTScore)
Backend and APIs: FastAPI, Flask, Streamlit, RESTful APIs, Postman
Databases: MongoDB, PostgreSQL, SQLite, Vector Databases (FAISS)
Cloud and DevOps: Amazon Web Services (AWS), Docker, Git, GitHub
Tools: Jupyter Notebook, Google Colab
Concepts: Data Structures and Algorithms, Machine Learning, Information Retrieval (BM25), REST API Design

EDUCATION

Bachelor of Technology in Information Technology 11/2022 – 05/2026
Bundelkhand Institute of Engineering & Technology, Jhansi **CGPA: 8.07/10**
Relevant Coursework: Machine Learning, Artificial Intelligence, Database Management Systems, Data Analytics, Cyber Security, Data Structures and Algorithms

PROJECTS

AI Code Investigator | Python, FAISS, BM25, Cross-encoder Reranking, RAG, LLM GitHub

- Built a hybrid RAG system for codebase question answering, combining FAISS vector search, BM25 keyword retrieval, and reranking to deliver the top 5 relevant code chunks for grounded LLM responses.
- Improved answer reliability with confidence-based abstention, LLM-generated responses with file-and-line citations and exponential backoff for up to 3 API retries; evaluated retrieval quality using a 19-case test suite.

Domain Watch – AI DNS Threat Analyzer | Python, Scapy, SQLite, Packet Sniffing GitHub

- Engineered a real-time DNS threat detection system combining Scapy-based packet capture, 25 domain features, XGBoost classification, and hybrid heuristic analysis to identify malicious domains and suspicious DNS behavior.
- Benchmarked 4 machine learning classifiers using 5-fold cross-validation; achieved 91.5% accuracy and 0.901 ROC-AUC with XGBoost, integrating Flask APIs, SQLite storage, and interactive monitoring dashboards.

WORK EXPERIENCE

AI and ML Intern, Evoastra Ventures Inc. 02/2026 – 03/2026

- Developed a supply chain demand prediction platform using Random Forest, XGBoost, and Neural Network models, exposing predictions via FastAPI and Streamlit, and containerized with Docker, serving 25 internal users.
- Designed a scalable 4-stage ML pipeline covering feature engineering, model training, dashboard analytics, and Docker deployment.

Machine Learning Intern, Suvidha Foundation 04/2026 – 05/2026

- Implemented an evaluation framework using 50+ metrics across lexical similarity, structural quality, readability, entity coverage, and content overlap, leveraging TF-IDF cosine similarity, ROUGE, and BERTScore.
- Constructed a Python data preprocessing pipeline for NewsSumm article-summary datasets, improving semantic quality by 12.5% and reducing redundancy by 97%.

CERTIFICATIONS

- Oracle Cloud Infrastructure AI Foundations Associate – Oracle, 2025
- AI Agents Intensive Program – Google via Kaggle, 2025
- Postman API Testing Certification – Postman, 2024

ACHIEVEMENTS

- Solved 500+ Data Structures and Algorithms problems; achieved Knight rating on LeetCode and 3 Star on CodeChef.
- Led a team to Top 6 at Smart India Hackathon 2025 (Software Edition) by delivering EduTrackAI, an AI-based compliance monitoring system.
